SUMMARY

Flutter Developer building cross-platform mobile applications for iOS and Android with Dart, BLoC/Cubit, and Clean Architecture. Fresh graduate (Class of 2026) experienced in REST APIs, JWT authentication, Firebase (incl. FCM), push notifications, local storage, and responsive UI. Built PlantLife, a production-ready IoT & AI system (graduation project, grade A), and led the Flutter team on Qanouny, a Top Project in Egypt's Digital Egypt Pioneers Initiative (DEPI). Focused on clean, testable code and smooth performance.

TECHNICAL SKILLS

Core: Dart, Flutter, Widget Lifecycle, Flutter Architecture, iOS & Android Development, Asynchronous Programming (Futures, Streams)

State Management: BLoC, Cubit (flutter_bloc), Provider

UI: Responsive & Adaptive UI, Material Design, Custom Widgets, Data Visualization, Localization (EN/AR with RTL), Smooth UI Performance

APIs & Backend: REST API Integration, Dio, JWT Authentication & Token Refresh, Firebase (Auth, Firestore, Cloud Storage, Cloud Messaging/FCM), Payment Integration (Stripe, PayPal)

Device & Storage: Push & Local Notifications, Camera & Image Upload, Local Storage (Hive, SQLite, Shared Preferences), Real-Time Data Streams

Code Quality: Clean Architecture, MVVM, SOLID Principles, OOP & Design Patterns, Dependency Injection (get_it), Clean & Testable Code, Debugging & Performance Optimization

Workflow: Git & GitHub, Code Reviews, Cross-Functional Collaboration (Backend, Design, QA), AI-Assisted Development Tools

PROJECTS

PlantLife — Smart IoT & AI Plant Care System

Graduation Project • Grade: A | [GitHub](#)

- Built a production-ready cross-platform Flutter app on a scalable **Clean Architecture** with BLoC/Cubit — integrating multiple backend services and AI APIs, with **JWT authentication and automatic token refresh**.
- Implemented **IoT sensor monitoring with live data visualization** (temperature, humidity, soil moisture, light) and **Firebase Cloud Messaging (FCM)** for real-time sensor alerts.
- Built **image upload workflows for AI disease detection**, treatment plan management with **local notifications**, and full **multilingual support (English & Arabic RTL)**.

Lakhasha — AI Study Companion

Personal Product | [GitHub](#)

- Built a cross-platform Flutter app with **Clean Architecture** (strict presentation/domain/data boundaries), **BLoC/Cubit** state management, and dependency injection via get_it.
- Integrated REST APIs, **Firebase Authentication**, and a secure server-side proxy — with typed error handling and local persistence for offline access.

Qanouny — Legal Services Mobile App

Team Lead • Top Project, DEPI | [GitHub](#)

- Led the Flutter team building a cross-platform app, **collaborating with designers, backend, and AI teams** to deliver a reliable release under deadlines.
- Architected with **Clean Architecture and BLoC**, integrating REST APIs and participating in **code reviews and Git workflows**. Selected as a **Top Project** of the initiative.

EXPERIENCE

Flutter Development Intern — Digital Egypt Pioneers Initiative (DEPI)

Jun 2025 – Dec 2025

Remote | Government-backed national tech talent program

- Led the Flutter team on **Qanouny**, a cross-functional AI-powered app — selected as a **Top Project** of the initiative and recommended for further development.
- Built scalable Flutter apps applying **Clean Architecture, BLoC, REST APIs, and Firebase**. Ranked **2nd in the Freelancing Track** and delivered a project for a **live client** independently, end-to-end.

EDUCATION

B.Sc. in Information Systems — Beni-Suef University

Class of 2026

Faculty of Computers and Artificial Intelligence | GPA: 3.1 / 4.0
